

Managed XDR (MXDR)

Get Serious about Security. Get 'Everything' Detection & Response
Our AI-powered Approach Unifies and Delivers Total Threat Protection

Overwatch MXDR delivers powerful open extended detection and response (Open XDR) for end-to-end cybersecurity solutions.

Cybercrime is rampant and businesses are demanding more from their security providers. Cloud adoption and work from home or anywhere – on any device – are blurring infrastructure boundaries as never before, creating an ever-expanding surface for cyberattacks. Overwatch XDR condenses the entire surface into an intelligent, manageable stream for more robust security, better threat identification and faster responses.

What is Open MXDR?

Managed Extended Detection and Response (MXDR) is a vendor-agnostic XDR solution that consolidates multiple security products into a single platform to better correlate, detect, and respond to threats. This centralized platform empowers security teams to more quickly and easily identify threats and breaches and provides context around incidents that can bolster and speed up response and remediation.

Open XDR Infrastructure

- ✓ The ability to achieve robust XDR through integration with existing infrastructure
- ✓ "Limitless" potential to adopt and integrate new technologies (as opposed to single-vendor solution limits)
- ✓ Future-proof ability to adopt new and cutting-edge infrastructure and security solutions

Overwatch MXDR

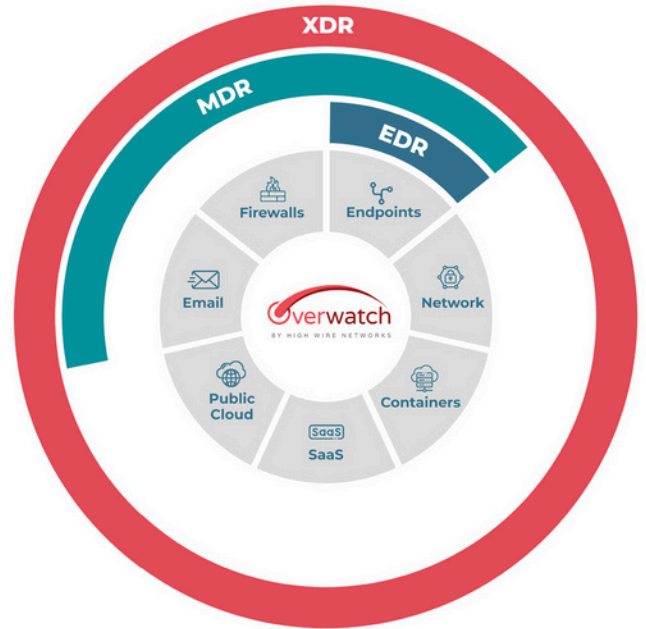

Overwatch MXDR from High Wire Networks is a turnkey solution built from best-in-class technologies and a best-practices security framework from the Overwatch Cybersecurity team. It's an integral part of our managed cybersecurity services suite, delivering AI-powered Open XDR solutions from the market-leading team and tools in the Overwatch 24/7 Security Operations Center (SOC).

Overwatch XDR Platform Features

- ✔ Comprehensive, automatic sensor-based data collection
- ✔ Physical (on-premises) and cloud visibility
- ✔ Integrated IDS/IPS paired with AI to reduce false positives
- ✔ 50,000+ detections for known and unknown behaviors, mapped to the cybersecurity kill chain
- ✔ Simple, easy-to-use GUI dashboards
- ✔ Advanced analytics and data-lake mining
- ✔ Built-in integration with other Overwatch solutions
- ✔ Integration with other systems, for GRC and more
- ✔ APIs for data export
- ✔ Built-in event-response and case-management capabilities:
 - Create a trouble ticket
 - Automatically send out PDF reports
 - Trigger email, Slack and restful API alerts
 - Signal firewalls to take appropriate action

Benefits of Overwatch MXDR

Security Benefits

- Protects your entire attack surface
- Enhances existing infrastructure with superpowered AI
- Delivers best-in-class intelligence regardless of existing security products and services
- Deploys across network, cloud and endpoint infrastructure
- Generates exponential improvements in detection (MTTD) & response (MTTR) times
- Developed and delivered by High Wire's market-leading SOC team

Cost Benefits

- Leverages existing infrastructure
- Fewer incidents to manage and recover from
- Faster recovery time
- Expandable and extensible in vendor-agnostic fashion
- Streamlined sourcing and ops

Benefits of Overwatch XDR + SOC

Rapid Detection + Response

SOAR automates data correlation, reducing false positives and alert fatigue so analysts can respond without delay.

Expertly Trained Security Analysts

Our analysts are trained experts in their field, which decreases mean time to recognition and action.

Reduction in Breach Risks

Faster detection and action reduces the overall risk of a breach, allowing containment.

User Management

We leverage behavior analysis, active directory monitoring, hostile network attacks, Microsoft 365, and G-suite integration and more.

Network + Infrastructure Monitoring + Protection

We use encrypted log storage, intelligence feeds, real-time automated remediation and asset discovery, API attacks and Zero-day protection.

Compliance Support

We provide policy templates, incident response management, compliance reports and documents, and auditor report access and SOAR automation.

Alignment with Industry Frameworks

Immediate alignment with defense-in-depth strategies and a balanced response through industry recognized standards like NIST, MITRE, HIPAA, and ISO.
